

RUGYEYO FARM
EXCEPTIONAL
HIGH-ALTITUDE
COFFEE

OUR COFFEE

Our coffee is grown at a high altitude, resulting in its rich and distinctive flavor.

With 95-99% of our farming practices using organic methods, we focus on sustainable soil management, shade tree cultivation, and a perennial underground water source. This investment sustains our crops and benefits the surrounding community, providing clean water access.

By choosing our coffee, you are not just enjoying a premium product but also supporting sustainable farming and local livelihoods.

FARMING EXCELLENCE

We are a center of excellence in coffee farming, inviting other farmers to learn sustainable agricultural practices. Our goal is to help others replicate our success and improve their yields while maintaining ethical farming methods.

We believe in sharing our knowledge and invite farmers to learn best practices from our farm. Our initiatives focus on improving coffee yield while keeping environmental sustainability at the forefront. Beyond producing excellent Robusta coffee, we prioritise social impact by offering clean water access to our community and creating job opportunities for local families.

OUR VALUES

- Sustainably grown, high-altitude fine Robusta coffee
- Commitment to organic and eco-friendly farming
- Supporting community development and employment
- Maintaining authentic taste

QUALITY & SUSTAINABILITY

We prioritise organic and sustainable farming methods, avoiding harmful chemical applications. We focus on maintaining high soil quality by incorporating natural composting methods and planting trees that enhance soil consistency. Our shade-grown coffee benefits from trees that naturally cool the temperature and enrich the soil. The result is a flavourful and consistent coffee profile that coffee lovers appreciate.

COMMUNITY IMPACT

Our farm provides employment opportunities to families, ensuring economic growth in our region. Additionally, our investment in a clean water source allows the local community to access fresh water, reducing waterborne diseases. We believe that coffee farming should positively impact both the environment and the people involved in its production.
